AGATA VIDEO DOOR ENTRY MONITOR HANDSET

With integral hearing aid induction loop for Equality Act 2010 (DDA) compliance.

The AGATA is available with either a colour or b/w screen: The following information is a general rule and applies to all video door entry monitors, all brands.

At night, colour monitors display images from the camera in B/W unless the level of illumination is typically above 15 lux; below this level, true colour rendering is not possible with most cameras.

3.5” LCD colour screens (ie small screens) are generally low resolution (320 x 240 pixels) resulting in pixelated images with soft edges and a general lack of detail. B/W CRT (cathode ray tube) technology screens have better response times, resolution, motion blur and contrast performance than LCD colour monitors. Do not compare display performance of a video door entry colour monitor with that of an iPhone which has colour screen display technology of 326 pixels per inch compared with the approximately 120 pixels per inch of an LCD 3.5” monitor.

NOTE:
A smart and popular solution with security features (remember, a video monitor door entry system is a convenience door opening system only, it is NOT a security system) is to inject the same camera pictures from the panels onto the communal TV system so available to all flats on Freeview Digital channel(s) in real-time 24/7/365 for improved convenience, performance and Equality Act 2010 compliance. Picture display quality is significantly superior in all measurable respects compared with video door entry system monitors and will be in colour during the day and, unless external illumination >15 lux, in b/w at night.

Dimensions code: 190mmH x 170mmW x 39mmD
