Creating Safer Living Environments

What security systems are in the market currently:

IPGUARD® 4G/IP Visitor Audio-Visual Door Entry, latest technology.

NPH 300 Visitor Video Monitor Door Entry – Hardwired

IPKEYSAFES® - SECURE STORAGE

Axis Network Camera

Samsung Techwin

IP Dome, Fisheye, Box, Bullet and PTZ cameras.

License Plate Readers.

Cloud video recorders.

Unusual Motion Detection Lockup.

Thermal cameras.

Presence Detector.

Network Video Recorders.

IP, Thermal, PTZ and Panovu Cameras.

ANPR Cameras.

Network Video Recorders.

Encoders

Switches

Displays.

Accessories.

Which system is best for you?

Finding the most appropriate and beneficial security system is never easy and can be very time consuming. This short article will help you make a more informed decision when working with security systems and be able to reap all the benefits of an effective security system. When deciding which security system to use it is important that you know your requirements, so that the chosen security system can satisfy all those requirements. **28% of adults took no measures to protect their property. Do not be part of this vulnerable segment!**

Is the IPGUARD® 4G/IP the right system for you?

Solve all your security problems with NACD's IPGUARD 4G/IP. Residents can use devices selected by themselves and so each user can make it most convenient for themselves. Residents are called on their own communication devices; landline, mobiles, smart phones, iPad's and tablets. IPGUARD 4G/IP constantly improves offering more features due to its cutting-edge technology using 4G and Cloud based communications. Another benefit from the IPGUARD 4G/IP is residents can be contacted when they are not even home, this feature has proved to be very helpful for deliveries and if you are not home you can instruct a delivery driver to leave delivery in a secure location of your choice as you can communicate to the driver via the IPGUARD® 4G/IP. This allows for picture of all visitors who called you with date/time stamp sent to your smart phone/device including missed/nuisance calls. You will never be contacted when you don't want to be.

To solve the problem of not being able to get to the phone NACD added the Automatic Call-Transfer, Multi-Share feature. Up to three telephone numbers selected by themselves and so each user can make it most convenient for themselves. Family simultaneous multi-share calling is coming shortly and will be remotely updated to all NACD IPGUARD 4G/IP.

Is the NPH 300 Visitor Video Monitor the system for you?

Another possible solution to your security problems could be NACD's NPH 300. NPH 300 requires a hardwired connection to be made. Despite the need for hardwiring the NPH 300 can connect to the cloud so that remote programming and updates is possible.

NPH 300 is compliant with Secure By Design framework and so keeps full audit trail of day, date, time & duration of all visitor calls to residents including door open authorization to enable easy identification of any residents abusing the system. NPH 300, consistent with Secure By Design requirements, works by a visitor entering the flat number onto keypad, also has special features for blind persons. When visitor calls from panel it will ring the desired handset or monitor & will display live video from the panel. To let visitors in simply press the Lock Release button if you would like to let them in.

CCTV Advice >>>

Why do I need CCTV?

As the world's population grows as does the negative externalities that come with it, one being crime. CCTV (Closed-circuit Television) is a great tool to overcome this problem and over the last decade it has been rapidly provisioned. Electronic Security Association states, about 83% of burglars would first determine whether a home has security cameras before they broke into the house and **60% of thieves would typically avoid homes with security cameras.** Therefore, having CCTV fitted on your property will massively reduce the crime risk. More than a third of organizations replace or upgrade their CCTV systems every 5-7 years.

How can Avigilon CCTV solve your problems?

Empower your security teams with powerful technology and software. Avigilon delivers a full range of video surveillance. Avigilon High Definition Stream Management technology preserves video image integrity while intelligently managing bandwidth. Avigilon video software provides intuitive, easy-to-use interfaces. Powerful ACC video software can manage an unlimited number of cameras. Avigilon software enables you to add multiple offices, buildings, or locations. Open platform security solutions easily integrate with your existing systems and technology and video management system works with both HD and analog cameras. Avigilon cameras are compatible with a variety of VMS platforms. Using high-definition video analytics, pattern-based analytics algorithms, and teach-by-example capabilities, Avigilon provide preventative protection through proven self-learning video analytics technology.

What CCTV would best suit you?

There are so many variations of CCTV equipment out there in the market that it wouldn't be possible to discuss them all. This section will discuss the top key players in the CCTV industry. To discover your CCTV solution contact NACD. They will design a bespoke system for all your needs and requirements. They will install the system consistent with all Secure By Design requirements and frameworks so that the end-user can reap all benefits from a fully functional system. All CCTV companies in this article are partners with NACD. Upgrading your standard definition system to analogue HD can be done with minimal cost and fuss as analogue HD uses the same cable infrastructure and plug and play installation techniques as analogue SD. Analogue HD is capable of transmitting and recording images in 1080P (1920 x 1080) HD resolution giving a performance comparable to an IP system and up to 4x higher than a traditional standard definition analogue system.

Samsung: Samsung offer a vast range of CCTV equipment all with different features. Some being, Super High Resolution, Visual Progressive Scan, Digital Image Stabilization, Intelligent Video Content Analysis. Product offerings; Full Body Cameras, Dome Cameras, 3 Megapixel Cameras, Night Vision, Fisheye Cameras.

AXIS: From robust outdoor cameras to discreet products for sensitive environments, AXIS offer it all. AXIS provide excellent HDTV image quality regardless of lighting conditions and the size and characteristics. They do it while minimizing bandwidth and storage needs to help you save energy. Analytic applications transform network cameras into business tools. They can alert you to developing situations and help you make smart decisions about operations and resource allocation. Data can also be integrated with your other systems.

HIK Vision: Hik vision designs and tailors network cameras to meet various requirements. From general video surveillance to video content analytics based on deep learning algorithms. Product offerings: Pro Series, Ultra Series, Panoramic Series, Anti-corrosion Series, Explosion-proof Series, Hikvision DeepinView Series.

Final Thoughts...

Every product you see in this article is distributed and installed by NACD. Please go to our website or enquire for more product details and for the rest of our product range. If you liked or have questions about anything you have seen please don't hesitate to get in contact with us. We will try our absolute best to answer any questions you may have. Please see below for contact details.

NACD is always trying to create safer living environments so if you are reading this and think you may have insight into the security industry we encourage you to head over to our LinkedIn page and post any insights in the comments section where this article has been shared.

The next issues will be posted on NACD's website, LinkedIn, Twitter & Facebook every other Wednesday. If you want to keep up to date with our News Articles, follow us on any of the above.
