

### PRICE SHEET, JANUARY 2023

Supplied pre-programmed with 10-digit ID number printed on reverse side. ID number identifies both the holder and the scheme.

Traditional fingerprint readers require ALL USERS to TOUCH the SAME SENSOR and are no longer socially acceptable due to the fear of COVID and other virus spread.

The IP-VIP™ Fingerprint Proximity Card is an extension of its user's fingerprint.

It is the card that is presented to the proximity reader – so no risk of virus spread.

Use the IP-VIP™ Fingerprint Proximity Card on all doors where GUARANTEED security is required – basically where a proximity key fob on its own is NOT enough.

The IP-VIP™ card is a BATICONNECT® CLOUD product so works with all BATICONNECT® range proximity readers.

It is, therefore, also very easy to upgrade your traditional fingerprint readers to a safe BATICONNECT® CLOUD solution!

**Fingerprint activated – totally secure!**
