ANTI-CLONE GUARANTEE

for KCP4V proximity keys / TEL433 or TEL8G radio transmitters

KCP4V Proximity Keyfob for residents

- KCP4V proximity keys are each **engraved with a unique 10 digit ID number**.
- The first 5no digits **identify the scheme**, the last 5no digits **identify the user**.
- They are also **sequentially numbered** for ease of administration control and security.

Radio Transmitter for motorists

TEL433

TEL8G

- TEL433 and TEL8G radio transmitters are each **engraved with a unique 10 digit ID number**.
- The first 5no digits **identify the scheme**, the last 5no digits **identify the user**.
- They are also **sequentially numbered** for ease of administration control and security.

This is exactly the same numbering ID principle – copied from the mechanical key manufacturers – as used for the highest security level of mechanical keys available on the market.

It is the only ID numbering methodology that completely guarantees 100% accurate future-proof fully traceable control of every proximity key and radio transmitter.
